

VyapaarMate Subscription Pricing Report

Detailed calculation for monthly SaaS pricing, setup fees, usage pass-throughs and business break-even

Prepared for	PSHR Innovex / VyapaarMate
Prepared on	June 23, 2026
Scope	India launch pricing for local businesses using website ordering, bookings, UPI/Cashfree payments, WhatsApp updates, CRM, staff roles and reports.
Recommendation	Starter at ₹1,499/month and Pro at ₹2,999/month. Setup and provider usage costs stay separate.

Core pricing decision

Use a simple two-plan public model for now. Starter is the entry plan for small single-location businesses. Pro is the operating plan for active daily businesses that need CRM, campaigns, staff roles, reports and priority support.

Executive Summary

The subscription should charge for the VyapaarMate software and operational support only. Payment gateway charges, WhatsApp message/template costs and GST should be treated separately because they vary by provider, usage volume and regulatory/tax setup.

Plan	Monthly price	Best fit	Commercial logic
Starter	₹1,499	Home sellers, tiffin providers, solo services, small stores	Affordable entry point while still covering support, payment workflows and admin review.
Pro	₹2,999	Restaurants, kitchens, salons, pharmacies, grocery, service teams	Charges for CRM, campaigns, staff workflow, reports and higher support load.

1. Starter Plan Calculation

Starter is priced for businesses that mainly need a public ordering or booking surface, payment tracking, WhatsApp updates and a simple owner dashboard. The price should stay low enough for small businesses, but not so low that support and onboarding become loss-making.

Component	What it covers	Allocated charge
Public page and catalog/menu/services	Business page, menu/product/service listing, availability, basic public workflow.	₹200
Order or booking workflow	Customer order/booking capture, owner alerts, order status states, customer invoice link.	₹250
Payment tracking and invoices	Cashfree checkout hooks, UPI QR/payment rows, payment status refresh, invoice access.	₹200
WhatsApp update workflow	Consent path, template-ready order/status update flow, message logging and failure handling.	₹150
Basic dashboard and customer list	Owner operating view, customer records, basic history, payment visibility.	₹200
Hosting, database, security and monitoring	Tenant runtime, PostgreSQL usage, auth, rate limits, backups, production monitoring allowance.	₹150
Admin review and standard support	KYC/subscription review, payment issue handling, business approval support, basic owner help.	₹249
Product maintenance and reinvestment buffer	Bug fixes, dependency/security maintenance, product iteration buffer.	₹100
Recommended Starter subscription	Low-volume direct orders, bookings or catalog requests.	₹1,499/month

Interpretation

The largest part of Starter is not raw hosting cost. It is the productized value of structured order/booking capture, payment state, WhatsApp update readiness and the support burden of approving and helping a small business go live.

2. Pro Plan Calculation

Pro is priced as Starter plus the operating features required by businesses that use VyapaarMate daily with staff, campaigns, repeat customers and reporting. It should be the recommended plan for any business with regular order volume or a team.

Component	What it adds	Allocated charge
Starter base	Everything in Starter: website/catalog, order or booking workflow, payments, WhatsApp updates, dashboard.	₹1,499
CRM and repeat reminders	Customer segmentation, repeat activity history, reminder workflows for opted-in customers.	₹300
Campaign workflows	Campaign planning surface, consent-safe templates, repeat sales workflows.	₹250
Staff roles and RBAC	Owner/manager/operations roles, staff access, audit-conscious team workflow.	₹250
Advanced reports and live operations	Daily sales/booking reporting, live dashboard refresh, top items, pending payments, operational metrics.	₹250
Priority support and admin operations	Faster setup queue, payment/WhatsApp troubleshooting priority, launch support.	₹300
Higher usage headroom	More active daily operations, staff activity, campaigns and customer records.	₹150
Recommended Pro subscription	Daily operations with staff, CRM, campaigns and reporting.	₹2,999/month

3. Setup Fee Model

Setup should be charged separately because onboarding work varies heavily by catalog size, WhatsApp template work, payment configuration and staff training. Folding this work into the monthly subscription would either undercharge complex businesses or make Starter too expensive.

Setup item	Starter charge	Pro charge
Business profile, location and service area	₹750	₹1,000-₹1,500
Catalog/menu/service setup	₹1,500-₹2,500	₹2,500-₹4,000
Payment setup and test order	₹1,000	₹1,500-₹2,000
WhatsApp display/template guidance	₹1,000	₹2,000-₹3,000
Staff, campaign and reporting setup	Not usually needed	₹3,000-₹4,500
Launch QA and owner walkthrough	₹749-₹1,749	₹1,000-₹1,500
Recommended setup fee	₹4,999-₹6,999	₹9,999-₹14,999
Setup rule Quote Starter setup at ₹4,999-₹6,999 and Pro setup at ₹9,999-₹14,999. Use the higher end when catalog size, WhatsApp approval work, service radius configuration, staff training or payment testing is heavier.		

4. Usage Costs and Taxes

Provider charges should not be hidden inside the SaaS fee. They move with transaction volume and message usage, so they should either be passed through directly or recovered through a clearly stated usage policy.

Cost type	Recommendation	Reason
Payment gateway fees	Pass through to business or include in order economics, not subscription.	Gateway fees vary by provider/payment method. Razorpay publicly shows online payments starting at 2% plus GST; Cashfree lists standard domestic payment gateway pricing around 1.95% with promotional/custom variations.
WhatsApp message/template charges	Pass through as usage-based messaging cost.	WhatsApp Business/API providers treat message or conversation pricing as country/category dependent usage.
GST on SaaS invoice	Decide whether public prices are exclusive or inclusive of GST.	Cleaner B2B billing: quote ₹1,499/month + GST and ₹2,999/month + GST once GST registration applies.
Platform commission	Keep at 0% for launch.	A simple monthly SaaS price is easier for local businesses to understand than commission on every transaction.

5. Business Break-Even Check

The recommended subscription prices are reasonable because the business can justify them with a small number of extra direct orders or bookings each month. The profit-based view is more conservative than gross-sales break-even and should be used during sales calls.

Scenario	Starter	Pro
Food gross-sales break-even at ₹250/order	₹1,499 / ₹250 = 6 orders	₹2,999 / ₹250 = 12 orders
Food profit break-even at 30% margin	₹75 profit/order; 20 extra orders/month	₹75 profit/order; 40 extra orders/month
Service gross-sales break-even at ₹600/booking	₹1,499 / ₹600 = 3 bookings	₹2,999 / ₹600 = 5 bookings
Service profit break-even at 50% margin	₹300 profit/booking; 5 extra bookings/month	₹300 profit/booking; 10 extra bookings/month

6. What Each Plan Should Include

Feature area	Starter	Pro
Public business website/catalog	Included	Included
Orders/bookings and owner alerts	Included	Included
Cashfree checkout / UPI payment tracking	Included	Included
WhatsApp status updates	Included when approved	Included when approved
Customer CRM	Basic customer list	Full CRM and repeat reminders
Campaign workflows	Not core	Included
Staff roles	Owner-led	Included
Reports	Basic	Advanced sales/booking reports
Support queue	Standard	Priority

7. Commercial Recommendation

Publish **Starter at ₹1,499/month** and **Pro at ₹2,999/month**. Keep 0% platform commission during launch to reduce objections. Charge setup separately and disclose that payment gateway fees, WhatsApp usage and GST are separate costs.

If the company wants to show GST-exclusive B2B pricing, use “₹1,499/month + GST” and “₹2,999/month + GST”. If it wants consumer-style inclusive pricing, keep checkout at ₹1,499/₹2,999 and account for tax internally.

Sales positioning

Sell Starter as the entry digital counter and Pro as the daily operating system. Avoid discounting Pro below ₹2,499/month because support, CRM, campaigns and staff workflows create real operational load.

8. Source Notes

Source	Pricing signal used
Razorpay pricing page	Online payment gateway pricing starts around 2% plus GST; payment features should be treated as provider costs.
Cashfree payment gateway charges	Domestic payment gateway pricing varies by method and offer; standard/public reference around 1.95%, with custom enterprise pricing.
WATI pricing page	WhatsApp Business/API pricing includes usage-based conversation/message charges that vary by country and interaction.
Petpooja pricing/features page	Restaurant software bundles billing, reports, CRM, menu, support and add-ons; VyapaarMate should not underprice daily operations and support.
